FreshFlow Beverages Pvt. Ltd.

FreshFlow Bottling Plant - Pune Production Facility

FSSAI: 10012022000345 | ISO 22000:2018 / ISO 14001:2015

STANDARD OPERATING PROCEDURE

Maintenance Procedure for Filling Line 74

Department: Filling

Document Number: SOP-074
Revision: Rev 2.0
Classification: CONFIDENTIAL - INTERNAL USE ONLY
Prepared by: Engineering / QA Department
Approved by: Plant Manager

Document Control Information

Parameter	Value
SOP Number	SOP-074
Title	Maintenance Procedure for Filling Line 74
Department	Filling
Plant	FreshFlow Bottling Plant - Pune Production Facility
Prepared By	Arjun Nair
Reviewed By	Rajesh Kulkarni
Approved By	Rajesh Kulkarni - Plant Manager
Issue Date	2023-08-13
Next Review Date	2026-07-22
Revision	Rev 3.2

1. Purpose

Ensure consistent, safe, and hygienic operation of the filling equipment to produce product meeting FreshFlow quality specifications and HACCP critical control point requirements.

2. Scope

Applicable to all Filling department operators, shift supervisors, and maintenance technicians working on Line A and Line B filling equipment.

3. Prerequisites and Requirements

3.1 Training Requirements

- Operator has completed FreshFlow Filling Operations Training (TRN-FIL-001)
- LOTO certification current (refreshed annually)
- Food hygiene induction completed within last 12 months
- GMP guidelines (SOP-GEN-010) understood and signed off

3.2 Tools and Materials Required

- Calibrated instruments as listed in the plant calibration schedule.
- Appropriate PPE as specified in Section 4.
- Completed permit-to-work (if required for maintenance activities).
- Access to relevant equipment manual and P&ID drawings.
- CMMS access to create and close work orders.

4. Health, Safety and Environmental Requirements

! WARNING

This SOP must not be carried out without appropriate PPE and, where required, a valid Permit to Work (SOP-SAF-006). If in doubt about safety, STOP and consult the Safety Officer (EMP009 / EMP017).

4.1 Identified Hazards

- High-pressure CO_2 gas (asphyxiation risk if CO_2 zone entered during leak)
- Cold product (2-4°C) - risk of slip on wet floors
- Hot CIP chemicals (75°C caustic) - chemical burn risk
- Moving machinery - entanglement hazard (never reach into running starwheels)
- Glass bottles (FM102) - laceration risk from breakage

4.2 Emergency Response

In case of any emergency during this procedure: Press the nearest Emergency Stop, alert personnel in the vicinity, call the Safety Officer and Shift Supervisor. Refer to the Emergency Response Plan (SOP-SAF-004) and site evacuation procedure.

5. Detailed Procedure

5.1 Pre-Task Verification

1. Confirm the relevant equipment is available and no conflicting activities are planned.
2. Check shift handover log for any outstanding issues with this equipment.
3. Verify all required materials, tools, and chemicals are available and correctly labelled.
4. Obtain all required permits (PTW, hot work, confined space as applicable).
5. Brief all involved personnel on this SOP before starting.

5.2 Main Procedure

1. Perform pre-task briefing with all involved team members.
2. Verify relevant equipment status on SCADA - confirm normal operating condition.
3. Carry out the main task following the equipment manual and technical drawings.
4. Check results against the acceptance criteria specified in Step 6 (Quality Checks).
5. Record all observations, measurements, and parameter readings in the plant log.
6. Notify the shift supervisor upon task completion and confirm handover.

6. Quality and Verification Checks

Verification Check	When	Responsible	Record
All product contact surfaces visually clean	Before production	Operator	Shift Log
CIP conductivity <=20 uS/cm	After each CIP	Operator	CIP Record
CIP pH 6.5-7.5	After each CIP	Operator	CIP Record
Microbiological swab <10 CFU/cm2	After each CIP	QC Lab	Micro Report
Key process parameters in normal range	At startup	Operator	SCADA Historian
First-off product sample - Brix, pH, CO2	After startup	QC Analyst	QC Lab Report

7. Non-Conformance and Escalation

If any check fails or if the procedure cannot be completed as written: STOP the task. Do not force equipment to operate outside specification. Escalate to the Shift Supervisor (Suresh Patil / Ravi Deshpande). Raise a Non-Conformance Report (NCR) in the CMMS system. QC Manager (Anita Desai) must be notified for any product safety impact.
